

## Rental Bike Sizing Guide

**A**= \_\_\_\_\_

### **A = Saddle Height**

This is measured from the CENTER of the pedal spindle in a straight line up the center of the seat tube to the TOP of the saddle.

**C**= \_\_\_\_\_

### **C = Nose of Saddle to Center of Bottom Bracket**

For this measurement, the bike needs to be on level ground. Hold a plumb line from the TIP of your saddle, let it down past the CENTER of the bottom bracket. You then need to measure the distance (parallel to the floor) from the plumb line to the CENTER of the bottom bracket.

**B**= \_\_\_\_\_

### **B = Nose of Saddle to Center of Handlebar**

This is the distance from the TIP of your saddle to the CENTER of your handlebar.

**D**= \_\_\_\_\_

### **D = Center of Handlebar to Center of Front Hub**

Measure from the CENTER of your handlebar (at the stem) to the CENTER of your fork dropout (or CENTER of the hub).
